

Safety

Bouncy Castles and similar equipment are included in product safety regulation SS-EN 14960:2006 which is a European standard. Our bouncy castles are designed and manufactured according to this standard. All of our bouncy castles have an area in front of the active area to act as shock absorber .

It is important that the equipment is used correctly and in accordance with all safety instructions that are supplied with the equipment and detailed below.

The bouncy castle must always be supervised by adults or parents who have read and understand the instructions.

Safety rules

- Do not use the bouncy castle when the wind is more than 10 meters/second
- Anchor the bouncy castle to the ground in a proper and secure way
- Remove shoes, necklaces and sharp objects before you start to bounce in the bouncy castle
- Persons with big differences in weight should not bounce at the same time
- Do not climb on the walls
- No food and drinks inside the bouncy castle
- Always supervise children while they are in the bouncy castle
